I From Pre-School to Diploma

June – July 2023

Note

In Principal's Words

Maryam Delavar, Ph.D.

Dear esteemed parents, Gratitude fails to begin to appreciate your diligence and respect. Our well-educated staff at Nikoo International Education Complex regard students as divine, valuable, and unique. Therefore, we feel duty-bound to prepare the grounds for their thorough development, with an emphasis on individual differences, irrespective of issues like ethnicity, race, religion, or faith. Students are our children by choice; therefore, we valorize their physical, spiritual, and psychological well-being in a happy and lively educational environment. Ethics, creativity, participation, commitment, prudence, respect, order, discipline, continuously striving to gain the pleasures of a lifetime of learning, and attaining the qualities of the global citizen of the third millennium is the governing spirit of all the activities carried out at this institute. Our efforts are aimed at institutionalizing the culture of dialog, peace, empathy, and friendship to achieve sustainable growth and quality. Therefore, we need your support and aid as respectable parents. We hope that we will succeed in this hard but very valuable mission which dearly holds our love and interest.

Nikoo's Vision

Educating a third-millennium creative and learner intellectual

Live A Good Life

Nikoo International School is founded upon the latest scientific and educational achievements and the most productive available approaches in the realm of international education.

The basis of planning in our school, while adhering to education standards at a global level, is a unique curriculum model in line with the human values of the third millennium which has been drawn up and realized through the cooperation of internationally recognized and reputable people in the field of education and learning. At Nikoo International School, the purposes of the internationally-compatible courses will extensively contribute to the students' development of character, talent, and creativity and additionally, equipment with the necessary life skills. In this way, students will acquire the skills and ability to establish effective communication with multitudinous cultures and become responsible, creative, and self-effacing citizens who are contributing team-spirited individuals, and are good negotiators and thinkers. We hope the existing body of experience empower all our graduates as ambassadors of a healthy and righteous school to the global community.

Nikoo's Distinctions

To establish initial understanding and personalize education for everyone, every student sits an entry English placement test as well as a psychological assessment at the beginning of the school year.

Children's Evaluation

To discover possible talents, promoting areas of strength and eliminating weaknesses, and personalizing the experience of education.

Interviewing & Counseling

Inviting parents to get familiar with the outlook and mission of the school and explaining the educational objectives of the international system.

A School Without A Bell

The only school without a bell or queue where disciplining is based on student empowerment and self-regulation.

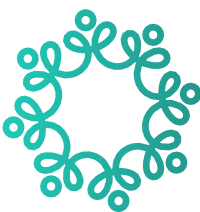

A Vibrant & Purposeful Environment

Creating a safe and vibrant environment for increasing feel-good hormones with an emphasis on our motto "Good sense of learning".

Dynamic Education

Teachings Based on Cognitive Sciences, Creativity, Entrepreneurship, and Future Studies with an Approach to Facilitate Teacher's Activities.

Ethics-oriented Discipline

A code of conduct based on the latest educational achievements and relying on psychologists in disciplinary roles.

Talents

Nikoo: Honors & Awards

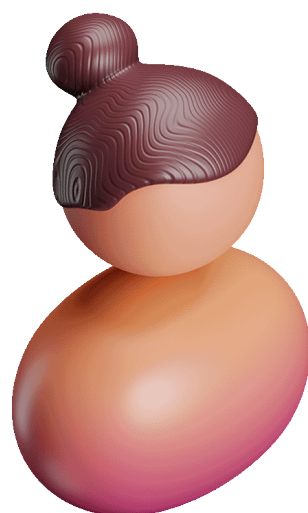

22 Medals in the Academic Year 2021–2022
17 Medals in the Academic Year 2022–2023
150 Medals Since 2019

Educational Departments at Nikoo

Department of Counselling for Children and Adolescents

During the process of counseling, this department provides the children with support in all aspects of their school life. The children learn to find their areas of strength and develop healthy behavioral habits.

The counselor meets and talks to you and your child. They ask questions and listen to your answers. This enables them to have a better understanding of any possible problem. Sometimes it is necessary to use various kinds of assessments. These assessments are often used in the case of those children who are not able to properly communicate their issues.

In performing the counseling, sometimes an analysis of the child's drawings may help to form a better understanding of their inner world.

Department of Physics

Teaching problems in physics and using practical and non-practical tools can boost children's mental activity and flexibility. Teaching physics helps in promoting efficiency and learning the correct use of tools.

Students should have many opportunities to experiment and experience using a wide variety of tools. After the stage of learning to use the tools, it would be time to make models based on the scientific methods, which ultimately leads to a better understanding of concepts of physics.

If children and teenagers are properly trained in solving problems and being more mentally active, they will make better decisions and choices at various stages of their lives.

Department of Biology

Biology examines and categorizes animals and their structure, function, and evolution at different levels. Although most of the students have learned biology from an early age, they are not able to create a general picture of what they have been taught, due to a lack of general understanding of the subject. For this reason, the students' interest and concentration should be focused on learning and mastering the subject matter. To ignite their interest, students could be offered the possibility to participate in interdisciplinary projects centered on biology.

The teacher's knowledge should also be in sync with the latest scientific developments so that the students get to know the wide and amazing fields of biological science and pursue new topics by themselves.

Department of Music

Nowadays, music has gone beyond the limit of a hobby or excitement, and its cognitive effects as a method of increasing mental capacity, concentration, motor skills, and coordination of the senses are stronger and more suitable than any other method. Among the most important goals of music education at Nikoo International School, one could mention the flourishing of creativity, achieving a stronger understanding of music, strengthening listening skills, establishing the main and basic principles of music as a science, and boosting the sense of cooperation and group work.

Children love music and feel it wholeheartedly. Practicing music and other forms of art is a means by which to improve and develop children's character. Music education largely depends upon parents. They should allow the teachers to guide their children in a direction that will increase their creativity.

Department of Art

Children enjoy the sound of the brush passing through the surface of the paper or any other sound that comes from the work they are creating at their hands. Unlike adults, most children do not focus on the result of their creation. Sometimes it is hard for some parents to accept this lack of results. But you have to remember that childhood is a crucial stage in mental development and also strengthening and promoting one's inner talents.

Department of Chemistry

Chemistry is the science of causes. To create interest in chemistry, the classroom should be continuously combined with practical work in a way that content can be expressed clearly based on experiments, and a logical connection between the concepts can be established. Another point is to engage the students with the issue they want to learn. Repetition and practice will strengthen the learning process. Directing students onto research pathways adds to the quality of education. Through research, students find out how chemistry has affected their life and the life of their family and therefore, they will be able to find genuine interest with the subject. Creative ideas can always be used for teaching. Active participation of students can turn the classroom into a dynamic and lively environment. Evaluations should be conducted individually as much as possible.

Department of Wellness and Sports

Children aged 12-3 are one of the most important age groups who need to exercise. It is much more difficult to compensate for children's overweight in this age group than excess weight problems during adolescence and later years. Therefore, many health control centers for children consider proper exercise an absolute necessity. Besides preventing obesity, sports and physical activities promote health, help children learn social behaviors and also release their energy and keep their vitality.

If you are a parent who cares about your child's vitality, join us to learn the right methods and patterns of health and well-being. Parents, who deprive their children of doing at least one type of sport, are negligent of their kid's growth and health.

Department of History, Geography, and Social Sciences

The young population of every country could have a better understanding of their society's current situation by obtaining knowledge about its past and civilization and also the cultural achievements of their predecessors to take calculated steps for their future.

At Nikoo International School, we seek to use the knowledge and creativity of motivated teachers to show that with proper use of available facilities and applying creative solutions, we can spark genuine interest in history and social sciences for children and teenagers. One of the useful and effective ways to make students interested in such issues is to take them to visit museums on guided educational tours. The presence of children and teenagers in museums provides the background and tools for the objective visualization of historical issues and helps them to quickly and permanently understand some historical subjects.

Department of Research and Technology

If we want a student to have a researcher mindset, the school must be research-oriented. Research is not just science or technology, but the beginning of wisdom. The purpose of leading students toward research is to apply the scientific method and create a spirit of wisdom, questioning, reasoning, and critical thinking.

At Nikoo International School, we believe that children should be allowed to face challenges and learn to solve problems. Research is not a lesson, but is learning a method, i.e., the scientific method, that is used not only in education but also in various stages of real life. Research is not limited to scientific activities and experiments, but is a kind of systematic and scientific thinking to deal with all issues.

Hoping for a bright future for today's thinkers!

Department of Brain and Skill Games

Playing games is a child's world. Children, through playing games, not only get entertained but also learn, experience, and get acquainted with their social roles. Today's emphasis by psychologists and educators on the importance of games is considered a tremendous development in education compared to previous centuries. The diverse functions of playing games at different ages are of great interest to parents, trainers, counselors, and therapists all over the world.

Nikoo International School is aware of the significance of playing games and uses every facility and method so that students can have a more solidified understanding of life through games. A wide range of mind and skill enhancement games are used with the facilitation of teachers so that children can study and live in a more dynamic environment.

Department of Literature

Literature of Children and adolescents includes tales, poems, dramas, fables, and stories. Literature nurtures children and youngsters at all times and promotes deepened thought, expands their imagination, and gives them the power of innovation. Stories and poems leave a lasting impression on people's thoughts and spirits and prepare them to face problems.

Nikoo International School at its Department of Literature pursues such goals as helping to develop the power of expression, emotions and thoughts, strengthening the power of imagination, fulfilling one's emotional needs, stimulating the power of initiative and creativity, and creating a sense of love and interest in literature. One of the most important literary tools is fiction and storytelling. Choosing the right story and the right method of storytelling is a skill that experienced and creative trainers can manage very well.

Department of Ethics

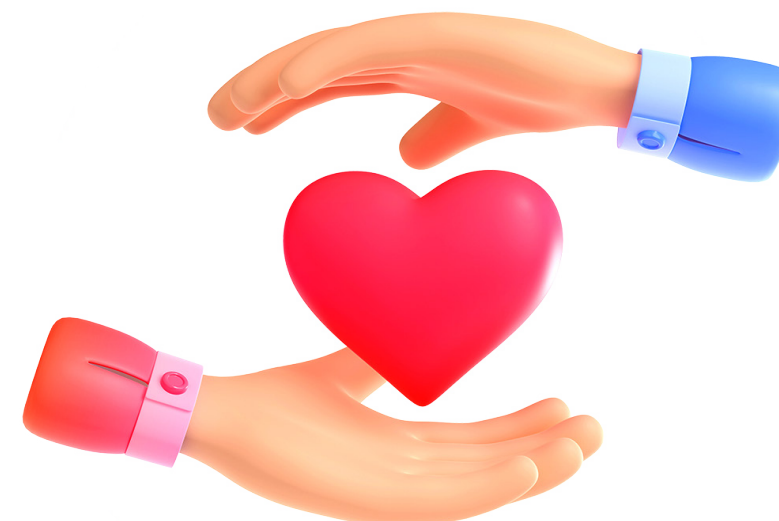

Nikoo International School benefits from more refined views on ethics and religion. It is expected that students in different courses, based upon their age, have some sense of familiarity with concepts such as faith, humanity, truth, altruism, kindness, respect, help, cooperation, etc.

All children and teenagers are human beings and like other human beings are interested in their personality. They want others to appreciate them and respect their personality. By respect, we mean a behavior that creates a feeling of value and satisfaction for the other party. Fathers and mothers who are interested in the character of their children should always respect them and cherish their very existence.

Department of Innovation and Entrepreneurship

Innovation has been an important tool for the advancement of science throughout history. Continuous innovation leads to high-level patterns of problem-solving and creativity. Creating a free space for students' activities and welcoming their different questions and ideas will form the basis for the development of innovation in the school. Nowadays, there is another view on innovation which regards it as the beginning of entrepreneurship and entering fields such as startups and new businesses. Global experience has shown that training entrepreneurs at an early age is highly effective in creating self-confidence and the development of a sense of independence and efficiency. Innovation and entrepreneurship are among the subjects that take a prominent place in the dynamic and up-to-date curriculum of Nikoo International School. We strongly believe that the familiarization of children and teenagers with economic concepts, the labor market, and life management should not be delayed.

Department of Empathy

Nikoo is the school of life. Children are a great blessing in our lives. We spend our love and interest on our children, but sometimes we may forget that we borrow love and interest for life and the future from them. We appreciate this gift and believe that children should live in an environment where they learn to love life above all else.

We have set off on this path with love. We are looking to provide a new model in education; a model that has the potential to become a global brand. Our sensitivity towards children, if not more than their parents, is certainly not less. Our difference with parents is perhaps that because of our educational knowledge and expertise and also our long years of experience working in the school, we have developed a view on education and learning which is systematic, purposeful, and logical. We don't want children to be kept away from hardships and challenges; rather our effort is for children to be happy, strong, self-confident, and successful in their social relations and above all, show empathy.

Empathy is one of the necessities of life for us. There is always an atmosphere of empathy at Nikoo and we encourage empathy in every situation and opportunity.
